

3 Quotes for 2 alternative styles of shed

Sizing is approximate (though width of main section (front) needs to be minimum 7.5m for Option 1 or 10.5m for Option 3 and can be larger if similar cost ie. Similar amount of material used but less cutting.

Roof pitch of both options is 45 degrees.

Awning pitch has been modelled on 11 degrees but can be changed if still aesthetically pleasing.

Corrugated colourbond sheeting

We need increased wind rating please.

Built on footings only. Footing price separate please.

Large Bay 1 has an opening only but with a view that maybe in the future it could accommodate a sliding door.

Two Smaller Bays 2 & 3 are openings only with roller door tracks on sides (supply own roller doors) but please include as an extra option for roller doors.

Bay 4 has an opening only on the right side big enough for triple glass doors or sliding window. Please include separately as an extra option with door/window included.

Back has one opening only for glass double doors/window. Please include separately as an extra option double door/window for this as well. Middle of this double door/window is at around 1600 mm (Option 1 & 3) or 2300mm (Option 2) from left/back corner of bay 4.

Also, please include as an extra option: a narrow (possibly around 1.5m) colourbond open awning just above window opening on the back elevation that is slightly longer than the opening.

Clear sheeting over Right Awning at Bays 3 & 4 colourbond over the rest.

Please include an extra option to erect the shed.

Barn windows in pictures are not necessary and do not have to be windows. Only there for some interest and other suggestions are welcomed. Please include as an extra option only.

Thank you

Option 1 (with 7.5m middle section width) & **Option2** (with around 10m middle section width) - **with 1 closed-in awning and 1 open veranda** (open veranda with square posts & beams to look like a house veranda)

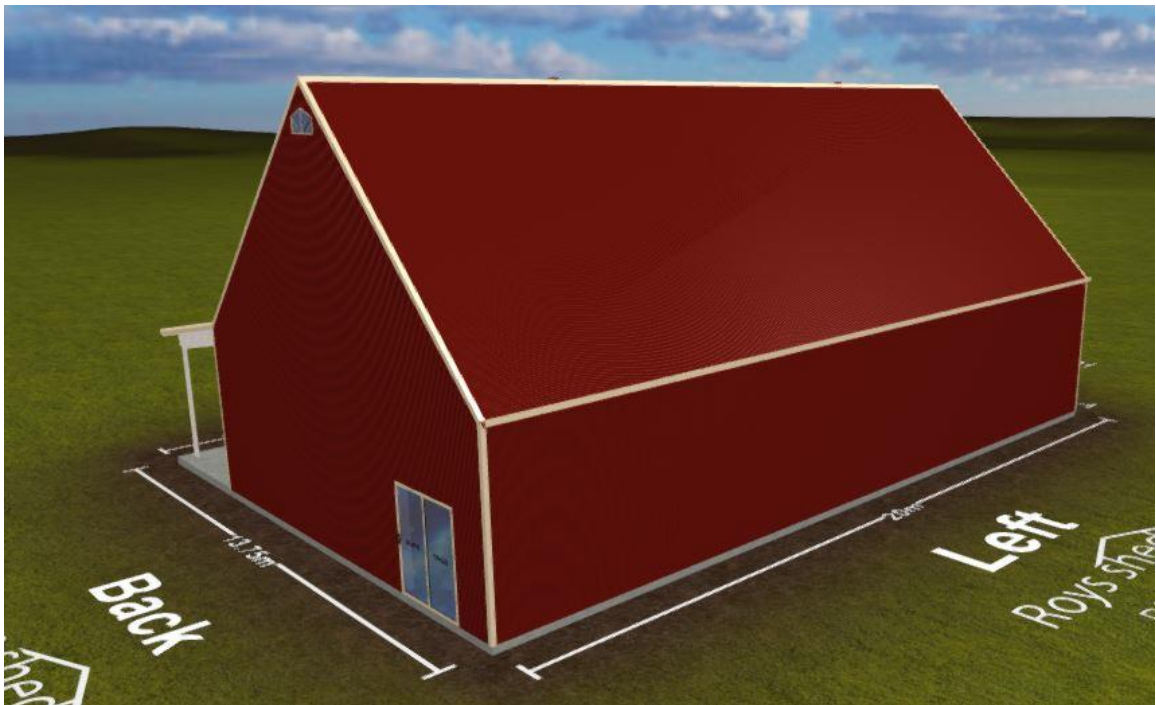

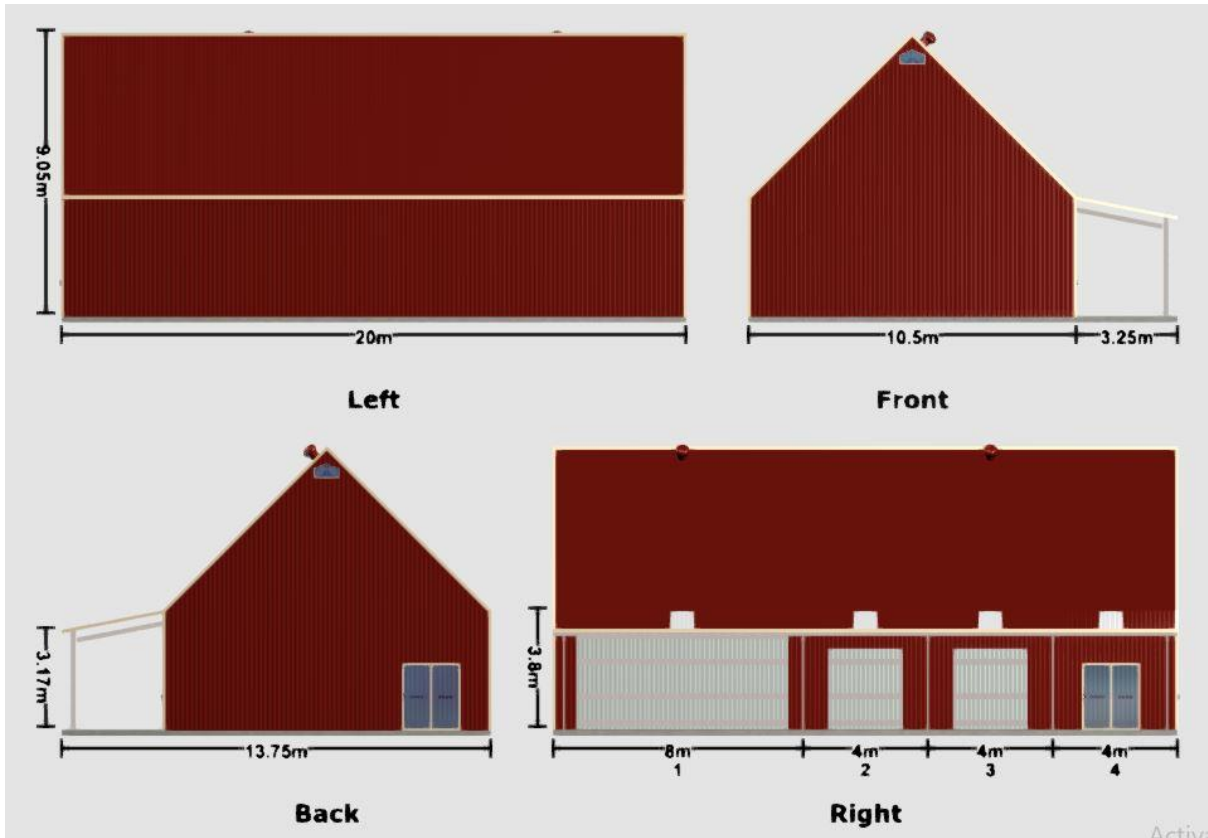

Option 3 - One Veranda Version (open veranda with square posts & beams to look like a house veranda)
