

We would like to get a skillion roof colourbond shed, 7m span, 9m length and 3m of roof over the extended slab (see picture of blue shed below for rough concept).

Monument colour, corrugated colourbond or the flatter/wider profile depending on price.

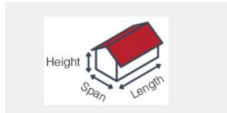

We'd like a man door from the carport into the shed (again, see pic of blue shed) and a big sliding door over an opening of half the length of the shed (see pic of green shed).

We'd also like a window in the span opposite the carport end.

The shed will sit alongside a proposed new house, set back into a bank, not dissimilar to the picture of the blue shed below.

To fit in with the house which will be a mixture of colourbond and rough sawn timber cladding, we would like to clad the sliding door in rough sawn timber vertical board and were also wondering if we could supply the window which I can get you dimensions for. See what you think.

There is access to the site. We have a builder on board and are anticipating pouring the slab for the shed February 2022.
